Sources

Unique, newly created elements, or any image from the customer are used as a source for creating paintings. Customer has the opportunity to participate in design process of painting. Design can be done virtually in customer interior. Usage of special manufacturing and display technology, allows to design and verify the final version of painting in the interior (colour and light structure, size, frame, location), before the physical production of painting starts and painting exists.

Technology

Design and production of paintings is processed by usage of computer programs and digital peripherals. Paintings are created by area's hand in the final phase of the production. This technique allows the production of colour related paintings. Painting can be generated in unlimited size, colour structure, cut, etc. The style of interior can be easily achieved then.

ME

I was born in the Czech Republic in the year 1961. I do use the computer technology for designing and preparation of paintings. I do use also my own and unique technology of handmade painting and fixing the final object. The main material is chalk. I opened my own gallery in 2001. The gallery is intended for the presentation of my own paintings only. The gallery is not, even partially, funded by any grants or subsidies. Petr Kosina

Usage

Paintings are generated typically for interiors of private apartments, hotels, restaurants, office space etc. Paintings are supplied in water resistant version. This is applicable for environment with high humidity such as bathrooms, outdoor environment etc.
